EXP-5 EXPERIMENT ON PACKET CAPTURE TOOL WIRESHARK.

AIM:-

Experiments on packet capture tool wireshark

PACKET SNIFFER:-

→ sniffs messages being sent / received from / by your computers

→ store and display the contents of the various protocols fields in the message

→ Passive Program

(i) Never sends packets itself

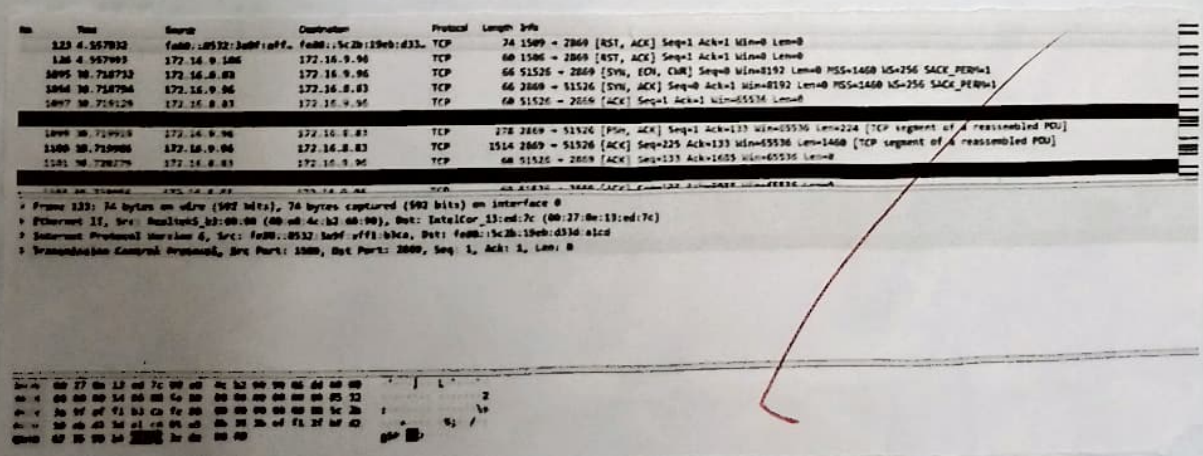

(ii) No packets added to it

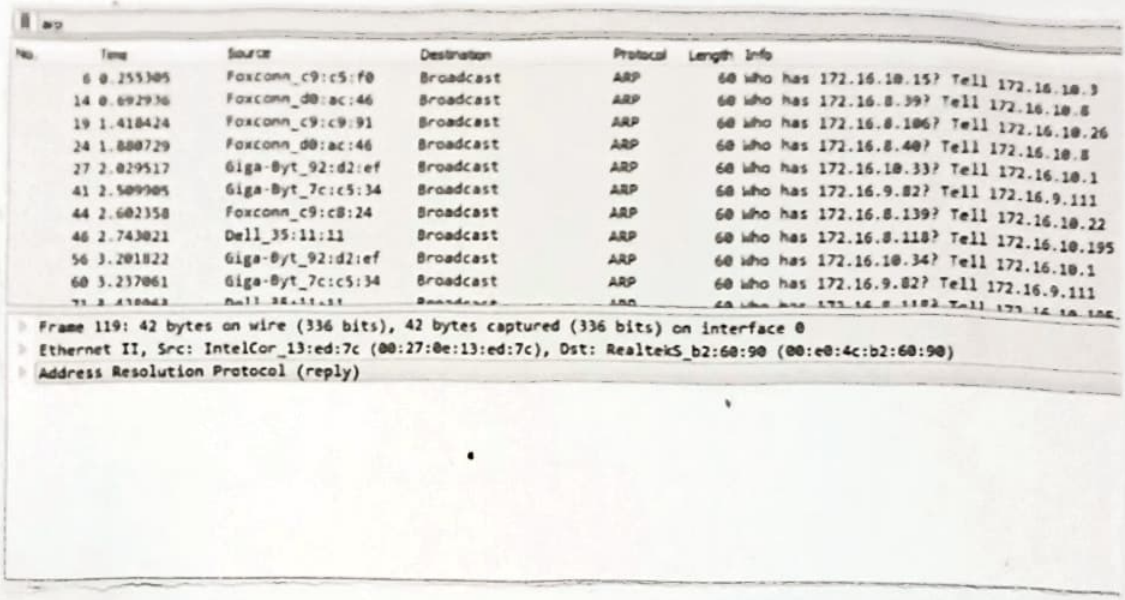

(iii) Recieves a copy of all packets (sent / received)

Packet Sniffer Structure Diagnotic tool

* Topdump eg:- tipdump enx host 10.12.9.41.2 -w exe3out

* wireshark - wireshark - r exe.3. out.

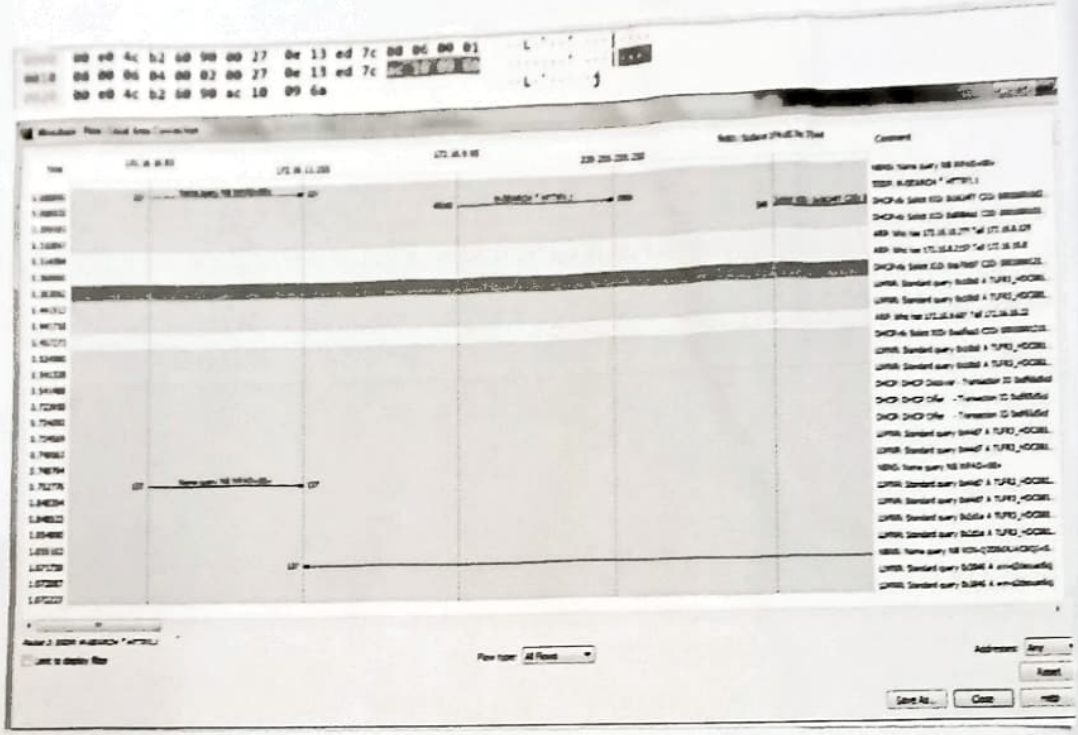

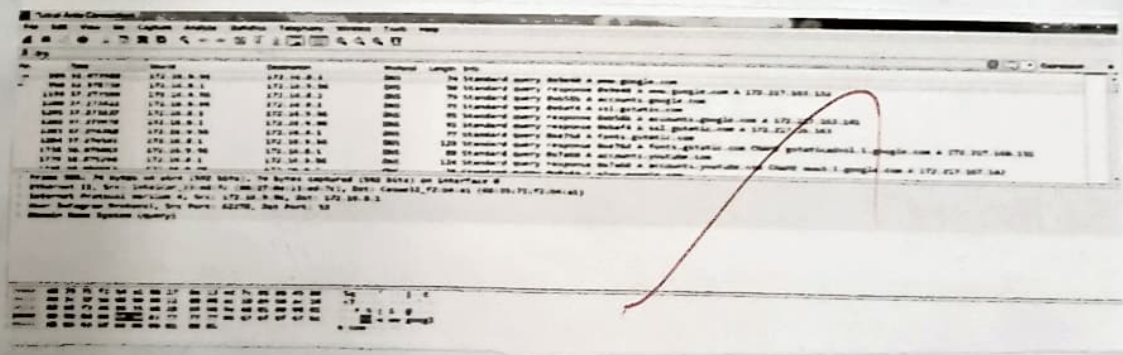

Procedure :-

→ Select the local area connection in wireshark
→ Go to capture & stop automatically after 100 packets.
→ Then click start capture
→ save packets.

(1) Create a filter to display only TCP/UDP packets, inspect the packets and provide the flow graph.
→ Go to search bar at the top of the tool.
→ Search TCP packets in search bar
→ To see flow graph click statistics flow graph.
→ Save the packets.

(iii) Create a filter for ARP packets

* Go to search option
* Search ARP packet in search box
* Save the packets

(iii) Creating a filter to display DNS packets and provide the flow graph.

(iv) Creating a filter for ICMP & DHCP packets and inspect & show the packets.

(v) Create filter for ICMP & DHCP packets & inspect & show the packets.

RESULT

Wireshark help us in analysing & understanding our network traffic & packet flow through various filters & flow graphs
