EXP 8 TO DISCOVER LIVE HOST USING NMAP SCANS

AIM:-

To discover live host using ~~Attg~~ Nmap scans (ARP, ICMP, TCP/UDP) on tryhackme platform room link)

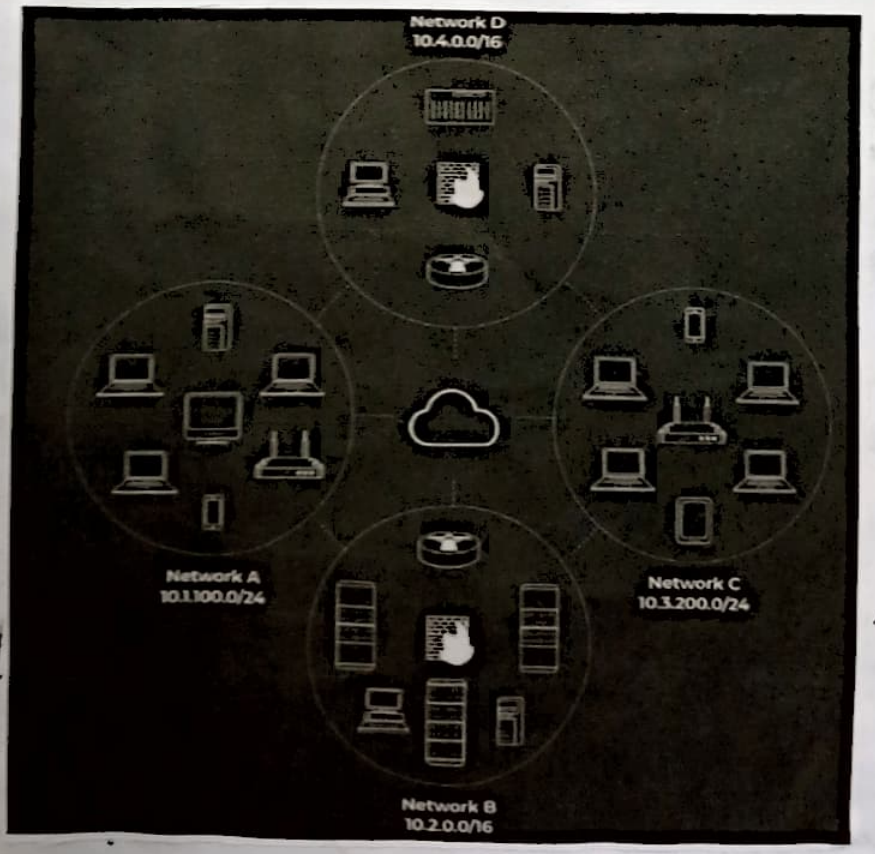

INTRODUCTION:-

when targeting a network we need a efficient tool to handle repetitive tasks.

This room is first of four in Nmap series

* Nmap live host Discovery
* Nmap basic port scans.
* Nmap advanced port scans

Subnetworks

Other types of nets :-

The figure displays 2 types of subnets

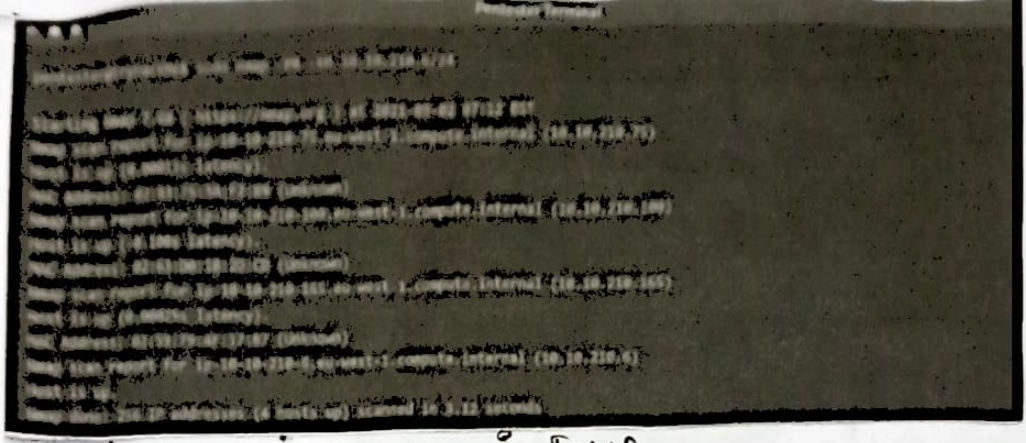

* /16 subnet * 24 subnet

From computer 1 to computer 1 packet type: "ARP Request"

from computer 4 to 1 Packet type: ARP request ^.

Nmap host discovery using ARP:-

when a privileged user tried to scan targets on local networks, Nmap use ARP request

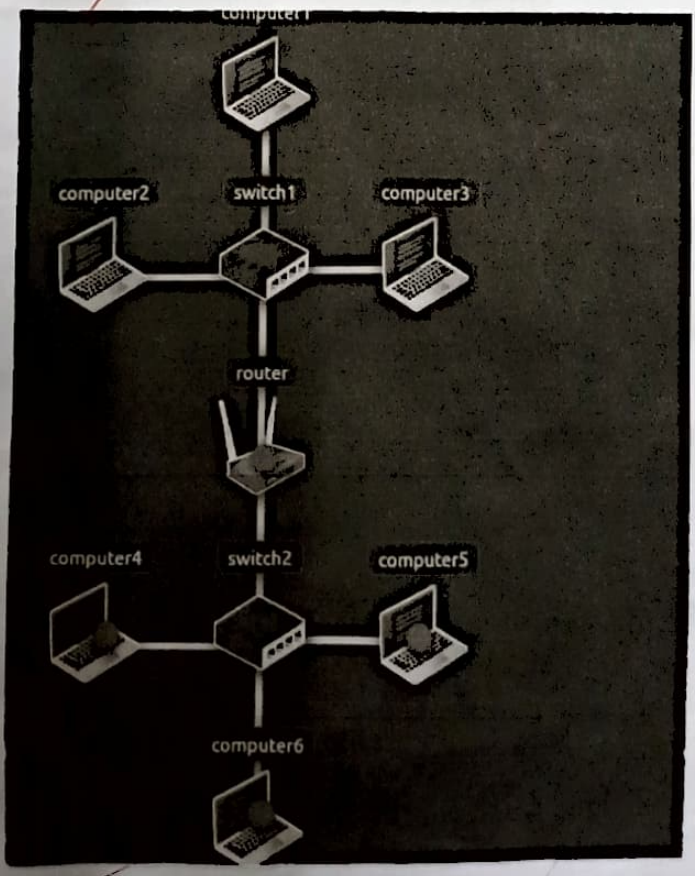

Nmap host discovery using ICMP

A simple method to identify live host or target network is by bringing each IP address & checking for responses

UDP Ping :-

While sending UDP Packets to open UDP ports, may not trigger a response, sending them to closed UDP Ports.

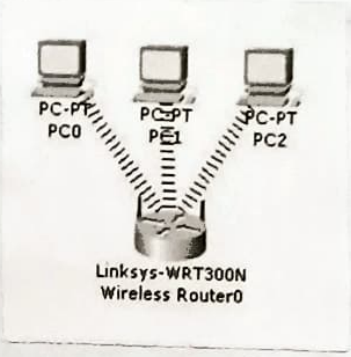

RESULT:-

The result has been computed successfully

EXP 8 b) CONFIGURATION OF WIRELASS LAN USING CISCO PACKET TRACER

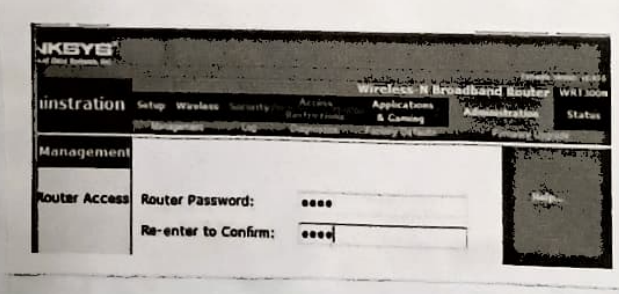

AIM:- Configuration of wireless LAN using CISCO Packet Tracer

Design a topology with three PC connected from Linksys window routers

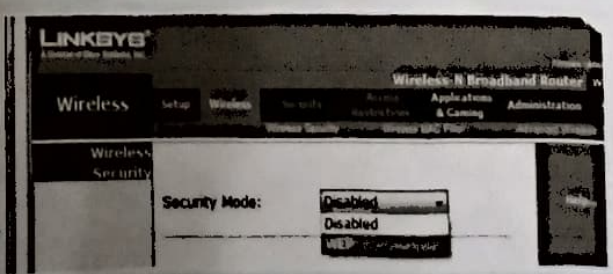

Procedure:-

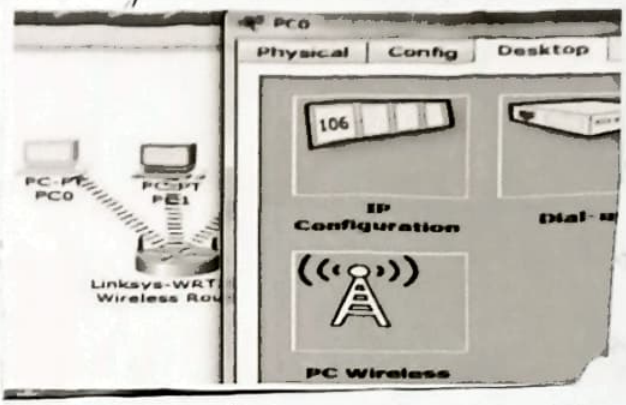

step 1:- click on window routers, select admin tab from top menu.

step 2 Now select wireless security & change security mode to WEP

step 3:- Set Key to 0123456789

Step 4 connect PCs from wireless router.

:

Step 5:-

Click on connect tab & click on refresh button

RESULT:-

The configuration has been completed successfully
